

PCG is an approved *Energy Star Partner*.

The US Environmental Protection Agency (EPA) launched ENERGY STAR in 1992 as a “voluntary labeling program designed to identify and promote energy-efficient products to reduce greenhouse gas emissions.” Since that time, the EPA has added many new services and offerings. Because a strategic approach to energy management can produce twice the savings - for the bottom line and the environment - as typical approaches, EPA's ENERGY STAR partnership offers a proven energy management strategy that helps in measuring current energy performance, setting goals, tracking savings, and rewarding improvements. EPA provides an innovative energy performance rating system, which businesses have already used for more than 21,000 buildings across the country. EPA also recognizes top performing buildings with the ENERGY STAR.

PCG supports the ENERGY STAR initiatives and partners with affiliates and suppliers who also support the ENERGY STAR program.

Why Use Energy Star?

Increasingly, Wall Street is making a connection between energy management and overall business performance. The ENERGY STAR label is a well-recognized brand that can be used to communicate cost management efforts to others such as executive management, customers and stockholders.
